LITOLEVEL

Tile levelling spacers

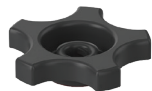

LITOKOL®

Litolevel guarantees **simple and fast** tile laying, eliminating lippage between tiles, thus ensuring **perfectly level floors and coverings**.

Litolevel is recommended for the laying of **large porcelain** stoneware, ceramic and natural stone tiles, as well as thin porcelain stoneware or agglomerate stone slabs (thickness 3/6 mm, 1/8" - 1/4").

The system is composed of 3 elements: base, cone and nut. **It does not require the use of pliers or tools of any type.**

NUT

The nut is made of rigid plastic and has been designed for **easy insertion** into the base. The nut too is **reusable** and can be used hundreds of times.

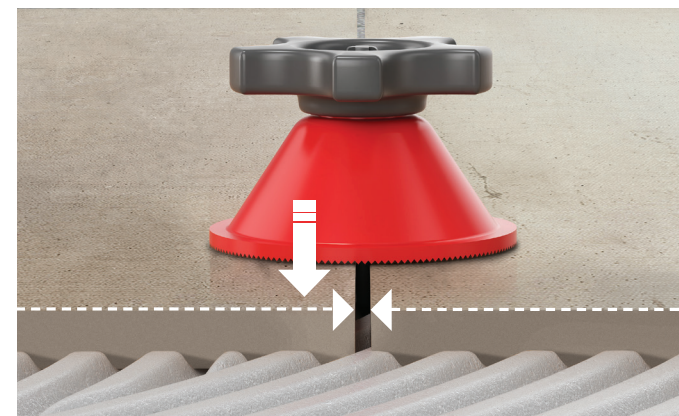

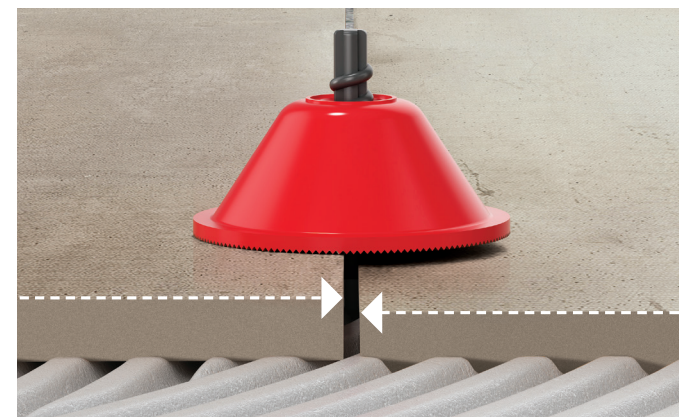

CONE

The cone is **practical and easy to insert**. It is made of rigid plastic, allowing efficient tile levelling. It is **reusable** and can be used hundreds of times.

BASE

The bases are designed to level tiles with thickness from 3 mm to 12 mm (1/8" - 1/2"), creating narrow joints measuring 1.5 mm (1/16"). Wider joints are possible through the combined use of Litolevel and cross or "T" tile spacers in the preferred size and in any case greater than 1.5 mm (1/16").

The cone does not rub against the surface of the tiles, which would otherwise be stained or marked. The system is able to level tiles gradually, increasing or decreasing the applied pressure by simply rotating the nut, thus allowing the installer the possibility to make any small adjustments that might be needed during installation. Unlike those with base and wedge, this system allows **easy removal** in case it is necessary to clean the joints from fresh glue. When the spacer is put under tension, **especially when laying thin slabs**, fresh glue can enter the joint: just unscrew the nut, remove the cone, proceed with cleaning, reinsert it and put it back under tension. The removal of the wedge, on the other hand, is much more difficult after being tightened in the base with the pliers.
